

# CASE STUDY: CENTRE FOR NEUROLOGICAL SUPPORT, PERTH

## ‘Adding soul to a clinical environment’

Located within the Niche Building, the CNS is home to a number of neurologically focused organisations that support various medical professions and the community. Bellfort Commercial Interior Design and Fitout were selected to refurbish the existing premises of the centre and add some soul to what was a clinical environment.

### Project Brief:

The Centre for Neurological Support were desperate to refurbish their existing premises and engaged Bellfort to create a welcoming and non-clinical environment for the staff and visitors. Wanting to infuse a balance of colour and texture into the interior lead Bellfort to choose Signature’s Botanica Carpet. These planks offer commercial grade performance with unique design options that echo the beauty of nature around us.

### Project Challenges:

Working within an occupied commercial space was the main challenge and required careful planning to minimise disruption to working areas. The benefit of using carpet tiles and planks allowed for work to progress in stages, and within fully furnished areas. By using the Botanica Plank ranges, vibrant colour was able to be introduced in a graduated way so that people with neurological disorders were not affected when entering the refurbished space.

### Why Signature Floorconcepts:

Bellfort Commercial Interior Design and Fitout specifically chose Signature Floors for their expansive colour and pattern range. This allowed Bellfort to vary colour and texture throughout the two floors and long corridors, which have become easily traversed and far more impactful and uplifting. The previous ‘clinical feel’ has now been eliminated.

### Client Feedback:

The client has been delighted with the refurbishment and the use of bold colour and texture to create inspiring interiors for the centre.
